Chinese gov't hackers snag secret missile plans in Navy contractor breach

Hackers from the Chinese Ministry of State Security who broke into the systems of a contractor working for the U.S. Naval Undersea Warfare Center stole 614GB of sensitive information, including plans for a supersonic anti-ship missile to be launched from a submarine.

The hacks, which occurred in January and February, according to a report in the Washington Post, yielded details on the Sea Dragon missile program, which was created in 2012 to adapt existing military technology to new uses.

BUSINESS › TECHNOLOGY

60% of small companies that suffer a cyber attack are out of business within six months.

Simple steps can help you avoid a hack that could destroy your fortunes

Statistics Canada Statistique Canada

Small businesses are businesses with 1 to 99 employees;
Medium-sized businesses are businesses with 100 to 499 employees;
Large businesses are businesses with 500 employees or more.

Overall, large firms with 500 or more employees are found to have accounted for 45.7% of the GDP produced in the business sector. Small and medium-sized businesses, including unincorporated businesses, accounted for the other 54.3%. The large-business share of GDP varied across the components of GDP. Large businesses accounted for the majority of operating surplus and supplementary labour income, but for less than half of overall labour income and indirect taxes less subsidies. The share of GDP accounted for by large businesses varied widely by industry. Large firms had a substantial presence (more than 50% of GDP) in utilities, information, mining and oil and gas, manufacturing, and transportation and warehousing, while they had little presence (less than 10% of GDP) in construction, other services, education, health, and agriculture, forestry, and fishing.
